	Examiner Stephen E. Jones	Art Unit 2817	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. The indicated allowability of the subject matter of previously presented claim 13 is withdrawn in view of the newly discovered reference(s) to Kuroda et al. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-11 and 14-32 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kuroda et al.

Kuroda (e.g. Figs. 1A and 1B) teaches a high frequency circuit board including a conductive ground plane (G1 or G2) which has openings that are formed by bridges of the ground lines to form a lattice pattern (i.e. signal line S2 is centered with the opening along its length (like present invention Fig. 2A), and signal line S3 is centered with a ground line along its length and has two sets of openings on its sides (i.e. not overlapping the signal line) along its length (like present invention Fig. 3)). Also, Kuroda teaches that the relationship to the ground lines and openings are chosen such impedance is essentially matched (e.g. see Col. 2, lines 50-67), and the opening can be considered continuous along the length of the lines in the same manner as the bridged opening of the present invention. Furthermore, it is inherent that the functional

limitations of the present claims are met by the Kuroda device, especially since it the same structure as the presently claimed structure.

Response to Arguments

4. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
